lab2 REP

task1

```
#Create a list of 10 integer
numbers=[10,23,5,44,56,77,33,23]
print("original list",numbers)

#sum,max,and min
print("sum",sum(numbers))
print("max",max(numbers))
print("min",min(numbers))

#add and remove element
numbers.append(25)
numbers.remove(10)
print("updated list",numbers)
```

```
original list [10, 23, 5, 44, 56, 77, 33, 23]
sum 271
max 77
min 5
updated list [23, 5, 44, 56, 77, 33, 23, 25]
second element apple
second element mango
modification list ['banana', 'apple', 'orange', 'kivi', 'mango']
```

Task2

```
#task 2
fruit=('banana','apple','orange','kivi','mango')
print("second element",fruit[1])
print("last element",fruit[-1])

#tuples are immutable,so modification will give an error
#convert tuple to list
fruit_list=list(fruit)
fruit_list[2]='orange'
print("modification list",fruit_list)
```

```
second element apple
second element mango
modification list ['banana', 'apple', 'orange', 'kivi', 'mango']
```

Task 3

```
#task 3
set_a={1,2,3,4,5}
set_b={4,5,6,7}

#Union, intersection,difference
print("union",set_a|set_b)
print("intersection",set_a & set_b)
print("Difference",set_a - set_b)
```

Task 4

```
# create dictonary
students={'ali':85,'sara':45,'sana':50,'ahmed':77,'aliya':87}

#print keys and values
print('keys',students.keys())
print('values',students.values())

#update value
students['ali']=97
print('updated dictonary',students)

# del values
del students["ahmed"]
print('After deletion:', students)
```

```
keys dict_keys(['ali', 'sara', 'sana', 'ahmed', 'aliya'])
values dict_values([85, 45, 50, 77, 87])
updated dictonary {'ali': 97, 'sara': 45, 'sana': 50, 'ahmed': 77, 'aliya': 87}
After deletion: {'ali': 97, 'sara': 45, 'sana': 50, 'aliya': 87}
```
